

# SAP HANA Readiness Workshop

## Is your business ready for SAP HANA?

**In-memory computing is transforming the way organizations run their business.** SAP is addressing the demand for in-memory computing with SAP HANA®, which combines both hardware and software to bring transactional and analytic applications together for near-real-time analysis. With SAP HANA you now have the ability to provide users with instant access to explore, model and analyze data in real-time.

However, there are a number of different migration strategies available to customers, along with specific hardware and software requirements that must be taken into consideration when moving to SAP HANA. As a leading provider of SAP HANA solutions, Wharfedale has developed a Readiness Workshop specifically designed to assist SAP customers in navigating the available migration strategies along with obtaining a deeper understanding of the efforts required in migrating their specific environment to the SAP HANA platform.

**Act Quick! Discover the best SAP HANA migration strategy for your business and receive a high-level project plan and cost estimate.**

*A limited number of workshops are currently being offered to both new and existing customers.*

### SAP HANA Readiness Workshop

This one to two day workshop is designed to provide a high-level understanding of what would be required in implementing SAP HANA for your specific organization and perform a review of the overall readiness and cost potential of migrating your organization to SAP HANA.

#### Some Key Deliverables

- Review and propose best migration strategy to support your specific business needs and current environment.
- Hardware and sizing recommendations based on identified long-term business needs.
- Comprehensive system readiness review to support SAP HANA migration.
- A high-level project plan, which includes estimated timeline and staffing requirements.
- Training requirements to support a successful migration to SAP HANA
- Review of business benefits in justifying HANA investment.
- An estimated total project cost to support the identified migration path for SAP HANA.

## Why select WFT as your SAP HANA Partner

- First partner to be certified by SAP on solutions powered by SAP HANA.
- Completed more SAP BW HANA migrations than any other SAP partner.
- Completed the largest production BW on HANA migration on record.
- Completed one of the first production SAP HANA Live implementations.
- Completed largest POC of Business Suite on HANA.
- Completed first production HANA migration using the new SAP DMO tool.

## Plan, Deploy, and Optimize with Confidence

Your designated SAP Account Manager (SAM) is your primary point of contact who provides guidance, architectural review, and ongoing communication to keep you informed and well prepared as you plan, deploy, and proactively optimize your solutions. As the cornerstone of the Enterprise Support plan, your SAM serves as your guide and advocate, focused on delivering the right resources to support the success and ongoing operational health of your Cloud infrastructure.

- A dedicated voice within WFT to serve as your technical point of contact and advocate
- Proactive guidance and best practices to help optimize your Cloud environment
- Orchestration and access to the breadth and depth of technical expertise across the full range of SAP Landscape
